My Commission Expires

employ the following
mining and reclama-
tion techniques on ap-
proximately 213 acres
of State and Private
land.

During Opera-

tions: Earth Energy
Resources will create
two overburden stock-

piles from the waste
rock as valley filled
dumps, but future

mine expansion will
backfill the previous
mine pits. Pit slope

angles will not exceed
2H to 1V. Bitumen is

the product from the
processing of the

native tars/asphaltic
material. Bitumen

products are anti-
pated to be stored on

site awaiting sale and
off site transportation.

The process train is
designed to accom-

modate 3,000-3,500
tons of ore per day,

producing approxi-
mately 2,000 bbl/day

of bitumen. There will
be no discharge from

the process pond.

Sediment controls will
be used in remote ar-

reas. Air quality will be
protected through best

management prac-

tices as discussed in

the Notice of Intention.

and the EPA has now

determined the mine

is not subject to New

Source Performance

Standards Subpart Ja.

After Operations:

All processing fa-

cilities will be removed

following mining and

either recycled or

hailed to a disposal

facility. The mine

dumps will be graded

down to slopes less

steep than 2.5H to

1V. Other areas will

also be graded to

slopes that blend with

surrounding areas.

Following regrading,

disturbed areas will

be covered with about

six inches of soil and

seeded with a mix that

includes both native

and introduced spe-

cies adapted to the

area.
